Risk and reward profile

What does this synthetic indicator mean?

- The category 6 means a high risk and consequently high potential losses and gains.
- The risk category is based on historical and simulated data and may not be a reliable indication of the future risk profile. The risk and reward category shown, and the categorisation of the fund, may change and develop over time.
- The lowest category does not mean a risk-free investment.
- Repayment of the initial investment is not guaranteed.

Which materially relevant risks are not adequately captured by the synthetic indicator?

- The investment in shares bears an issuer risk insofar as the issuing company might go bankrupt. This may result in significant or even total

losses of the value of the investments in these instruments.

- The investment in underlying funds implies that the sub-fund is exposed to 1) the investment risks borne by the underlying funds, 2) the risk of increases in the level of charges borne by the underlying funds and 3) the risk that the underlying funds limit or suspend the right for their investors to redeem.
- The use of financial derivative instruments that are not listed on a stock exchange or traded on another regulated market ("over-the-counter instruments") bears a counterparty risk in the sense that the sub-fund's counterparty for such instruments may find itself in a position where it is not able to honor all or part of their obligations towards the sub-fund.
- Other risk factors, that an investor shall take into account with regards to his own situation and specific current and future circumstances, may exist.

How can I get more information about the risks of the sub-fund?
